Transition Rate (%)
Below age transition funnel shows a near-complete continuation of biometric updates from the child (5–17) group into adulthood, with adult updates slightly exceeding child updates. This indicates sustained biometric engagement beyond age-based mandates.

A sharp decline in Aadhaar biometric updates after August 2025 indicates a structural shift rather than a temporary anomaly. This change is likely driven by a modification in reporting methodology, completion of a mass enrolment drive, or a policy transition. Post-transition values stabilize at a new, significantly lower baseline.
